

# 2145mm Full height Appliance Cabinet Shelf Options

Our 2145mm full height appliance cabinets are pre-drilled with allocated slots to install several shelves. Due to the working nature of full height appliance cabinets, two shelves are fitted with a cam and dowel system and two are mounted with shelf pegs (and are therefore not full depth). These can be positioned according to your preference (there are five predrilled slots above and below the appliance) and there is space for additional shelves to be purchased separately and mounted using the shelf-peg system.

The diagrams shown below illustrate the shelf positions.
