

1965mm Full height Cabinet Shelf & Door Options

Our 1965mm full height cabinets are pre-drilled with allocated slots to install up to seven shelves. Due to the working nature of full height cabinets, 2 shelves will be inserted on assembly. One shelf is assembled using a cam and dowel system for additional stability. This shelf can be mounted in one of two places, which is marked in red on the diagram below. We will assemble the second shelf in the other position marked red, unless specified otherwise. This shelf will be assembled with wooden dowels. Additional shelves can be purchased and mounted with 6mm nickel shelf pegs in the locations displayed below, for your convenience. These shelf locations are displayed below for your convenience. The dimensions shown below also illustrate the space between each shelf.

Depending on the chosen number of shelves, there are several methods in which doors can be fitted to full height cabinets. Standard door layouts are displayed below for your convenience.
